

# 3 BIG REASONS AUSTRALIA IS NOT 'NATURE POSITIVE'

The Australian Government is hosting  
the world's first Global Nature Positive Summit in Sydney today.

But hosting a conference won't hide the fact that  
the Government just approved extensions to  
three polluting coal mines big enough to cover most of Sydney.

**= 1.3 billion tonnes of emissions**

Australia Institute research shows that the Narrabri, Mt Pleasant mine and Ravensworth-Ashton mine extensions would result in 1.3 billion tonnes of emissions and directly threaten vulnerable species and habitats including the Glossy Black Cockatoo, Grey Box Ironbark Woodland, Hunter Valley Delma, and Box Gum Woodland.

## AUSTRALIA WON'T BE NATURE POSITIVE UNTIL AUSTRALIAN GOVERNMENTS STOP BEING NATURE NEGATIVE

**AT A MINIMUM, THAT MEANS:**

- + END NEW GAS AND COAL PROJECTS**
- + END SUBSIDIES FOR POLLUTING INDUSTRIES**
- + END NATIVE FOREST LOGGING**
