

# AUSTRALIA'S GAS POLICY MESS

Gas companies and the Australian Government claim that Australia faces gas shortages, while multinational exporters are shipping record volumes of gas out of Australia. Prices that Australians pay for gas have gone up, while government revenue from gas production has gone down.

**What's going on?**

## EXPORTS & PRICES

Gas production in Australia has tripled since 2010, but domestic consumption has barely changed. This means that around 80% of gas produced in Australia is exported.

Gas export terminals opened at Gladstone in Queensland in late 2014. This meant that for the first time, gas could be exported from Australia's east coast, giving gas companies the option to sell Australian gas into higher-priced Asian markets. This, in turn, meant that Australians suddenly had to pay world prices for domestically-produced gas: Australian wholesale prices tripled from \$3 per gigajoule (GJ) to \$10/GJ, and often rose even higher.<sup>1</sup>

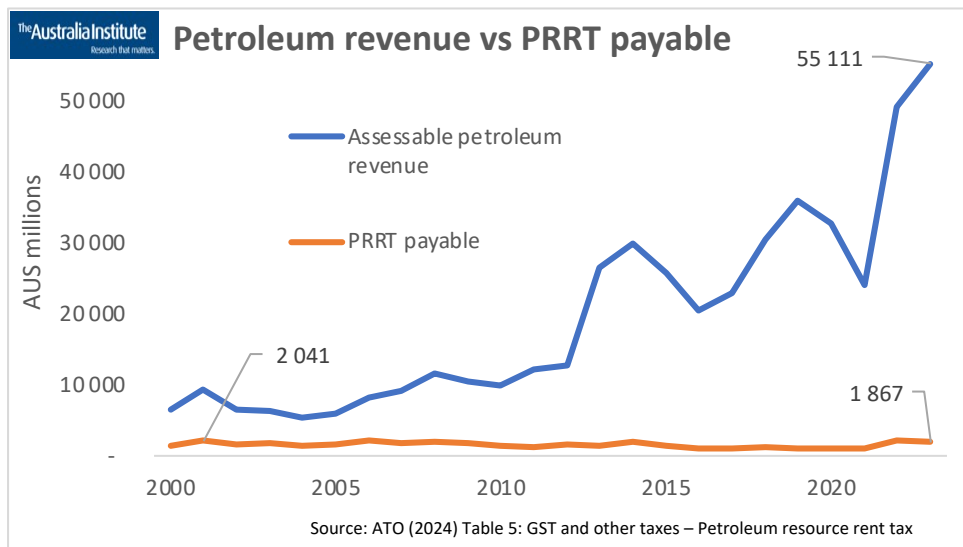

## PAYMENTS TO GOVERNMENT

The public owns Australia's natural resources, including its gas. The fees that companies pay to use these resources are referred to as royalties. However, most multinational exporters pay no royalties on the gas they export. In the past four years, \$149 billion worth of liquified natural gas was exported from Australia royalty-free.<sup>ii</sup> These companies also pay very little tax — so little, in fact, that the Australian Taxation Office (ATO) has called the oil and gas industry “systemic non-payers” of tax.<sup>ii</sup>

The Australian Government receives more money from:

- Income tax paid by teachers than tax paid by the gas industry.<sup>iv</sup>
- HECS repayments than Petroleum Resource Rent Tax paid by the gas industry.<sup>v</sup>
- Beer excise than taxes paid by Chevron, Exxon, Woodside and Shell combined.<sup>vi</sup>

Gas companies made \$55 billion in 2023, because the war in Ukraine increased world energy prices. Despite this record-breaking revenue, the payments received from the Petroleum Resource Rent Tax (PRRT) were lower in 2023 than in 2001.

## JOBS

The gas industry employs few people. Just 16,200 people in Australia work in oil and gas extraction, or 0.11% of the 14.4 million jobs in the country. For comparison, Manufacturing employs 902,900 people and the health sector employs 2.2 million.<sup>vii</sup>

## EMISSIONS

Emissions from the supply and use of natural gas accounted for almost a quarter (24%) of Australia's total emissions in 2022.<sup>viii</sup> This doesn't include emissions from Australia's gas exports, which reached 256 million tonnes CO<sub>2</sub>-e in 2022–23.<sup>ix</sup>

## A FAIR SHAKE OF THE GAS BOTTLE

Governments choose royalty and tax levels. It is a choice to give away gas royalty-free. It is a choice to tax the industry so lightly. By charging royalties on all exported gas and increasing the PRRT, the Commonwealth Government could have billions of dollars more to spend on public services.
